Safety Science

“Safety Science” is a twenty-first century term for everything that goes into the prevention of accidents, illnesses, fires, explosions and other events which harm people, property and the environment.

Safety, Health and Environment

Management

Effective safety and health management is about knowing how to identify and control hazards and applying key managerial principles so that employees work safely every day they're on the job.

IOSH MANAGING SAFELY

It's not about teaching, it's about learning

Managing safely: introducing a completely new approach to health and safety training.

Managing safely is for managers and supervisors, new comers in any sector, and any organization.

It's designed to get managers up to speed on the practical actions they need to take to handle health and safety in their teams.
